(54) AUCTION SYSTEM

(57)Abstract:

**PURPOSE:** To install the auction system at a low cost by executing the specification of an bid-receiving terminal and the judgment of a bid-receiving amount according to signals from a light transmitter/receiver to receive light from the bid-receiving terminal emitting infrared beams.

**CONSTITUTION:** As a bid-receiving terminal 1, a charging type to be carried is utilized, and information is transmitted by inputting infrared signals to a light transmitter/receiver 2 fitted onto the ceiling, etc., of the working site. Therefore, as the light transmitter/receiver, structure to transmit time zone signals can be adopted. In that case, the signals from the light transmitter/receiver 2 are received at the bid-receiving terminal 1 and it is confirmed whether a switch is closed or not. When the switch is closed, the number of the bid-receiving terminal 1 is received by the light transmitter/receiver 2, and the information is converted to electric signals and transmitted to an auction processor 4. At the processor 4, the information from a host computer 5 is extracted and displayed on a display device 6 installed at the working site. Thus, installation is simplified and the bid-reception is enabled at any free position without fixing the seat.
